

Job Title: Electrical Engineer

Location: New Jersey/California

Job Type: Full Time

Industry: Absorption Chiller

Closing Date/Time: Continuous

About the role:

We are seeking an electrical engineer who will embrace our innovative spirit and will work with a dedicated team in our daily business. The electrical engineer is responsible for managing daily operations and functionality of the equipment, as well as being a contact for customers and their service issues. The electrical engineer will assist in establishing and implementing short-and long-term plans to grow the field service business, maximize profitability, and provide world-class service to customers. This position will be responsible for the overall success of the company.

Job duties:

- Team with mechanical engineers for preventive maintenance and trouble shooting
- Install, inspect, analyze, diagnose, repair absorption chillers
- Basic understanding of technical documents
- Commitment to customer satisfaction and retention
- Ensure the equipment and facilities are well maintained
- Other responsibilities as assigned

Qualifications needed:

- Master's degree with at least one year experience or Bachelor's degree with 5 years' experience.
- Knowledge of absorption chiller and CCHP
- Ability to manage priorities and timetables
- Experience with tech integration a plus
- Bilingual (English/Chinese) a plus
